Document notes

Monthly income arrives before that month's bills; intra-month timing is not modeled.

Cost growth is a user-entered nominal annual percentage / 12, compounded monthly on living costs only.

Tuition uses declared unpaid due dates and actual billing interval; no future fee increases are inferred.

Foreign expenses use today's available reference rate plus the selected stress; future rates are unknown.

Funding is available at the beginning; buffer is a reserve, not a paid expense.

User-provided and confirmed inputs; not independently verified
